

| Name   | RAVEN'S MATRISER - STANDARD   |
|--|---|
| Purpose:                                     | Is a nonverbal test for the assessment of cognitive function in children and adolescents  |
| Short description:                           | The raven's matrices are a series of non-verbal ability tests intended for general abilities assessment. The raven's matrices can be used in both clinical and work-psychological contexts and constitute the internationally recognized standard for "g-tests". Ravens matrices measure the ability to, based on known information, make a logical derivation of new relationships and patterns. SPM can be used on normal children and adults |
