

BAYLEY-III (BAYLEY SCALES OF INFANT AND TODDLER DEVELOPMENT)	
Name	
Purpose:	Test for versatile developmental assessment of infants and young children
Short description:	This Norwegian version of Bayley-III consists of translated and linguistically adapted parts of the US original version. The scales found in Norwegian are the cognitive scale, the language scale and the motor skills scale - scales that make up the core of Bayley-III. Scales have a specific starting point for different ages as well as criteria for interrupting the test, which makes the testing time more efficient. For the most tasks, various toys or image materials are used. All materials are included in the complete test kit and are clearly described in the administration instructions. The two additional scales for the assessment of socio-emotional and adaptive behavior are not included in the Norwegian version. Assessment with this test instrument contributes to a nuanced understanding of child's development in a number of areas; what skills he or she has developed and his or her strengths and weaknesses
Academic area/skills:	<ul style="list-style-type: none"> •Basic cognitive skills •Reseptiv and ekspressive kommunikasjon •Fine and gross motor skills
Target group:	1 month–42 months (3 years and 5 months)
Survey method:	Individual
Standardization:	US norms
Adapted/non-adapted to Norwegian conditions:	The Norwegian version consists of a manual supplement with all the tasks in the mentioned scales, as well as guidelines for administration and scoring. In addition, there is a protocol in Norwegian
